Cloud Pak for Data – Tutorial

Cloud Pak for Data is a single end to end platform for data management, governance and data science analytics. It provides a one stop shop for data scientists, data engineer and data stewards to collaborate on the platform to acquire, govern and extract best insights from the data in the least amount of time.

In this demo, user will use a set of a fictitious mortgage data that available in Db2 database on IBM Bluemix Cloud. User will perform following tasks to predict if a prospective customer may default on their mortgage.

- Create connection from Cloud Pak for Data to Db2 database on cloud
- Discover Db2 assets from Cloud Pak for Data
- Transform the Db2 data on Cloud Pak for Data
- Use analytics dashboard to build visualizations
- Build a simple machine learning model from prediction

1. Prerequisites

- Access to an operational Cloud Pak for Data Instance
- Install Git on the machine that you will use for the tutorial.

2. Setting up database and sample data

Log in to the cluster where Cloud Pak for Data is deployed or log in to a Linux-based system (RedHat or Ubuntu) that can access the cluster over your network.

From your home directory, clone the tutorial sample files:

```
git clone git@github.com:IBM-ICP4D/ICP4DTutorial.git
```

Change to the tutorials directory:

```
cd ICP4XTutorial/tutorials/
```

The sample data-loading utility, `load_samples.sh`, provides an easy way to host a Db2 server and load it with sample data.

Run the following command to view the list of sample data that is provided in the `load_samples.sh` utility:

```
./load_samples.sh -l
```

Run the following command to load the sample data into a Db2 database:

```
./load_samples.sh -t mortgage-002
```

After the loading process completes, an instance of Db2 is hosted on your cluster as a Docker container.

3. Access Credentials

To work through the tutorial, you need access a Db2 database.

3.1. Access credential for Db2 database

For this tutorial you need JDBC connection to access to a Db2 database that hosted locally on Cloud Pak for Data. Following are JDBC connection credential for Db2:

JDBC Host name	<Same IP address as your web console>
Port number	50000
Database name	MORTGAGE
User ID	db2inst1
Password	password
Db2	Version 11.1
JDBC connection string	jdbc:db2://<same IP as Web Console>:50000/MORTGAGE

3.2. Sign in to Cloud Pak for Data web console as Administrator

You should have an operational Cloud Pak for Data Instance. Use latest version of Firefox or Google Chrome browser to access the Cloud Pak for Data web console. Starting from here all instruction need to execute on Cloud Pak for Data web console only. You need to login as admin who has administrator privileges.

Sign in  Username <input type="text" value="admin"/> PASSWORD <input type="password" value="*****"/> <input type="button" value="Sign In"/>	Sigh in to the Cloud Pak for Data web console as user 'admin' and password is 'password'.
--	---

4. Create Connection

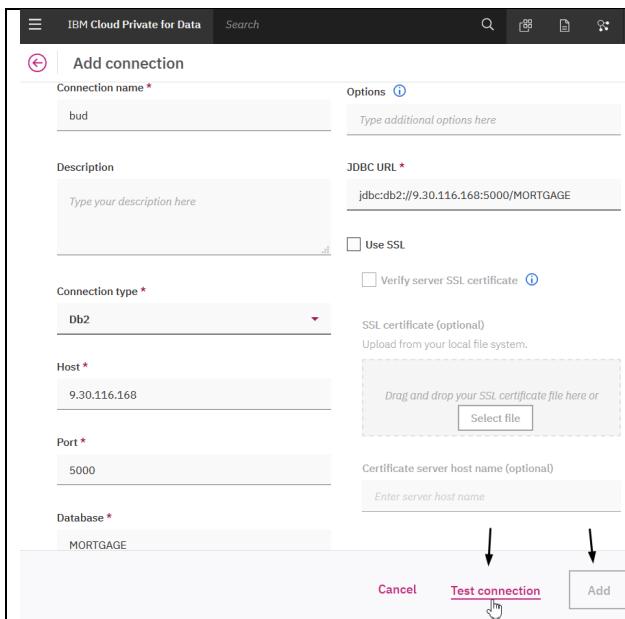

Create a connection to the data source for Db2 database.

4.2. Navigate to Connections

On the left pane choose **Connections**. Next, on the **Data Connections** window click on the **+ Add connection** icon.

4.3. Add connection

Fill out the **Add Connection** information according to the information provided in step ‘2.1. Access credential for DB2. Credential used in following step is just an example.

- For **Choose connection** use the drop-down menu and select ‘Db2’.
- Use ‘Bud’ as the **Name**
- JDBC URL** is ‘`jdbc:db2://172.16.171.29:50000/MORTGAGE`’
- Username** is ‘`db2inst1`’ and **Password** is ‘`password`’.

Next click on **Test Connection**, once it successful click on **Save Connection**.

Success The test connection was successful. Click Add to save the connection information.

5. Discover Assets

Use the data source created above discover all data assets from Db2 database.

5.1. Navigate to discover assets

6.	 <p>Filter navigation</p> <ul style="list-style-type: none"> <input type="checkbox"/> My instances <input type="checkbox"/> Collect <ul style="list-style-type: none"> My data Virtualized data <input checked="" type="checkbox"/> Organize <ul style="list-style-type: none"> All catalogs Information assets Data and AI governance Metadata curation Metadata import Data discovery Automation rules Data quality 	<p>From Organize option on the left pane, choose Metadata Curation > Discover assets.</p>

				Status updated																																															

6. Add users

Create users with different roles.

From **Administer** option on the left pane, choose **Manage users**.

Switch tab to 'Users' and click on 'Add user'

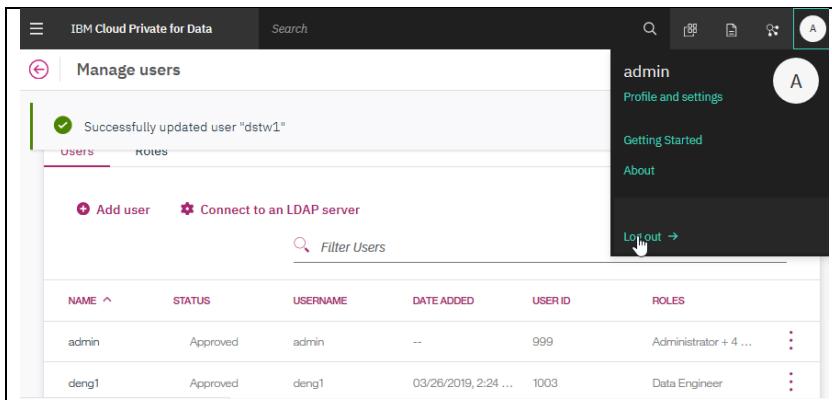

Fill out Add User information for a data scientist

1. Name as **dst1**
2. Username is **dst1**
3. Use a valid email address
4. Set Password as **dst1**
5. Choose the user roles as Data Scientist

Click on **Add** to confirm the add user

Follow same steps in Add User section (above) and two more account. Create **deng1** for Data Engineer and **dstw1** a data steward.

User	Role	Password
• deng1	Data Engineer	deng1
• dstw1	Data Stewards	dstw1

The screenshot shows the 'Manage users' page of the IBM Cloud Private for Data interface. At the top, there is a success message: 'Successfully updated user "dstw1"'. Below this, there are two tabs: 'USERS' (which is selected) and 'ROLES'. There are also links for 'Add user' and 'Connect to an LDAP server'. A search bar labeled 'Filter Users' is present. On the right side, a sidebar for the user 'admin' includes links for 'Profile and settings', 'Getting Started', 'About', and 'Logout' (with a mouse cursor hovering over it). The main table lists two users:

NAME ^	STATUS	USERNAME	DATE ADDED	USER ID	ROLES
admin	Approved	admin	--	999	Administrator + 4 ...
deng1	Approved	deng1	03/26/2019, 2:24 ...	1003	Data Engineer

Log out from user **admin**

7. Implement Policies and Rules

Create governance policies and rules for the entire organization to ensure clarity and compatibility among departments, projects, or products.

	Sigh in to the Cloud Pak for Data web console as user 'dstw1' and password is 'dstw1' that you created earlier.
---	---

7.1. Import Governance Assets

Cloud Pak for Data enables you to structure your enterprise information in a logical way, discover relationships between assets, and keep your data always up-to-date. You can import existing glossary with terms, categories, information governance policies and rules.

	Choose Organize > Metadata curation > Metadata import from the left pane.
--	--

7.2. Create a policy

Choose Organize > Data and AI governance > Policy from the left pane

Select Published tab and click on Create Policy

On the **New policy** window create a policy with following information and click on **Save as draft**:

Name: Data Validation
Description: Check for appropriate data

It will take few minutes to appear under list of available policies.

7.3. Create a rule

Choose **Organize > Data and AI governance > Rule** from the left pane

Select **Published** tab and click on **Create Rule**

Choose **Governance rule**

On the **New governance rule** window create a rule with following information and click on **Save as draft**:

Name: Income cannot be null
Referencing policies: Data Validation
Short Description: Income column must have a valid value

It will take few minutes to appear under list of available rules.

Click on **Add policy** under **Parent policies** to assign the rule to it.

7.4. Add rule to metadata

Click on the enterprise search, Search for 'mortgage_customer' and hit enter
From the search results select table 'mortgage_customer'

Click on **Details** tab at the top

On Database Table Details window choose **Database Columns** from left
Select INCOME column
Next click on icon (right top corner) and choose **Edit**

Scroll down to **Implement Rules** section

Search and select the rule **Income cannot be null** that you created earlier.

Click on **Save**

	<p>Log out from user 'dstw1'</p>
---	----------------------------------

8. Access data as a Data Scientist

Explore the data require for build a model

	<p>Sigh in to the Cloud Pak for Data web console as user 'dst1' and password is 'dst1' that you created earlier.</p>
--	--

8.1. Create analytic project

	<p>Create a new analytical project by 'Projects' from right pane. Click on the  icon Select Create an empty project</p>
---	---

<p>Define project details</p> <p>Name mortgage_data</p> <p>Description Project description</p> <p>Choose project options <input type="checkbox"/> Integrate this project with Git </p>	<p>Provide a project name and click Create</p> <p>Create</p>
--	--

8.2. Assets from Glossary

Let's look for mortgage related terms in glossary to get an idea about different data assets available on the system.

Choose **Organize** from the left pane, select **Data Catalog -> Queries -> Glossary Categories and Terms**.

You should have all mortgage related information as follows. Click on each **ASSET NAME, TERMS** for additional information. The **TERM DESCRIPTION** provides a basic information about each term.

IBM Cloud Private for Data		Search	≡	☰	≡
Category		Query Results: 10			
ASSET NAME	CATEGORY DESCRIPTION	TERMS	TERM DESCRIPTION		
Address Information	Location related glossary for a JK insurance customer	Customer Zipcode Continuity Of Address Segment Address part 1 Customer City Address part 2 Customer Street Suffix Customer Street Name Customer State Customer House Label Country Of Residence	Current zip code for customer's address Customer City Current suffix for street for customer address Current street name for customer's address Current state of residence for a customer House number with optional suffix		
Crown Jewels	All data that is sensitive customer info per regulatory obligations	Sensitive Personal Data	Any data deemed to be sensitive personal info for a customer		
Insurance Customer Details	Category for individual insurance customers	Gender Market Segment Summary	Customer's gender, if known Customer Market Segment Summary information about a JKLV insured customer		

For example, click on ASSET NAME **Customer**

a. Check Asset Details

Go through each item related to mortgage in glossary to have better idea about data you need for your project.

	<p>The asset Customer shows different terms associated with it. Check each Terms for additional information.</p>
--	--

b. Enterprise search

	<p>Click on the enterprise search</p>
	<p>Search for 'mortgage' and hit enter</p>

MORTGAGE_PROPERTY

MORTGAGE_PROPERTY

Database Table

    C2 --- C3
    C3 --- C1
  
```

Choose the **mortgage_property** table and click on **Relationship Graph** to see details about the table.

Click on the '+' next to **Database Column** to expand list of columns in the table.

Same way you can view other mortgage related tables.

39 Search Results

mortgage_property 67% RELEVANCY TABLE

mortgage_default 67% RELEVANCY TABLE

mortgage_customer 67% RELEVANCY TABLE

mortgage customer 67% RELEVANCY TERM

mortgage_join 65% RELEVANCY TABLE

mortgage_default 64% RELEVANCY COLUMN

Go back to the enterprise Search Result

The enterprise search will return all objects that mentioned word mortgage but as a data scientist you don't have access to any of those objects.

Click on the **New Data Request** on top right corner for request access to mortgage related datasets.

Fill up the **New Data Request** form with detail information as much possible, so a data engineer can provide accurate dataset. Click Confirm and then Submit request.

At this point you need to wait for data engineer to address the data request.

You can go to the home page by clicking on icon from left pane and check the status of the data request.

Sign out from user **dst1**

9. Review data request

Sign in Sign up

Username
deng1

PASSWORD

Sign In

Click on the new data request that submitted by data scientist earlier for review.
After reviewing the request click on Action in top right corner and select assign to me.

ID	Name	Status	Requested by	Assigned to	Priority	Last updated
1	Mortgage_Data_Access	Claimed	dst1	deng1	Medium	3 Jun 2019, 8:15 PM
2	Mortgage_Data_Access_Request	Claimed	dst1	deng1	Medium	3 Jun 2019, 8:41 PM
3	Mortgage_Data_request1	Claimed	dst1	deng1	High	3 Jun 2019, 8:39 PM
4	CustData	New	admin	Unassigned	High	4 Jun 2019, 9:03 AM

Action ▾

- Transform data
- Assign to  me

10. Navigate to data catalog

Once discover assets process completed. All database objects automatically cataloged in Cloud Pak for Data. You can review those database object in the catalog.

Next go back to **Organize** option on the left pane and choose **Data catalog**.

At this point Cloud Pak for Data should displays all the database objects. You can click each individual object under **Databases** to explore the catalog generated from discover asset previously. Click on the **Database Table** to check tables discovered from Db2. Take a look into the database named **mortgage**.

Under the **Database Tables** you can see ‘MORTGAGE_CUSTOMER’, ‘MORTGAGE_DEFAULT’ and ‘MORTGAGE_PROPERTY’ tables, cataloged from Db2 database.

The screenshot shows the 'All results' page in the Cloud Pak for Data interface. On the left, there is a sidebar titled 'Filter results' with a 'Clear all filters' button. Under 'Asset types (1)', the 'Database Table (46)' option is selected, indicated by a checked checkbox. Other options include 'Glossary and Governance', 'Databases (1)', 'View', 'Database Column', 'Database Alias', 'Stored Procedure', 'Stored Procedure Parameter', 'HBase Namespace', and 'Data Files'. A search bar labeled 'Search asset types' is also present in the sidebar.

The main area displays 'All results' with 46 results. The results are listed as follows:

- MORTGAGE**

11. Data Virtualization

Context: Data virtualization (DV) integrates data sources across multiple types and locations and turns it into one logical data view. In this case, you have data across three different tables. Creating a virtual table you can quickly view data from different tables.

11.1. Adding a new data source for Db2

Context: DV supports many relational and non-relational data sources (as well as files that reside on a local disk or network file system) that you can add to your data source ecosystem. After a data source has been added, any user that has virtualize permission can create virtual tables. DV agents connect to relational data sources using JDBC protocol. In this tutorial you will add a data source for Db2 database.

Define a data connection to Db2. Use your existing Db2 database connection for Db2 data source.

1. Go to **Collect > Virtualized data > Menu > Data sources**
2. Click **Add > New data source > Add connection**
3. Select **Db2** that you created earlier and click **Next**

11.3. Select tables for virtualization

Context: the most common mechanism for virtualizing data is to create a "view" or virtual table. Virtual tables can be full or segment of data from one or more tables. You can then run queries against the resulting virtual table.

<ul style="list-style-type: none"> • Click Collect > Virtualized data > Menu > Virtualize • Select tables MORTGAGE_CUSTOMER, MORTGAGE_PROPERTY and MORTGAGE_DEFAULT from MORTGAGE database, then click Add to cart • Click View cart • Click Next 	 <p>The screenshot shows the 'Virtualize' screen with the following details:</p> <ul style="list-style-type: none"> Menu dropdown: Virtualize Browse for: Tables Filters: Databases dropdown set to IBM Db2 FA... Available tables: 4 tables listed: <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">Table</th> <th style="text-align: left;">Schemas</th> <th style="text-align: left;">Database</th> </tr> </thead> <tbody> <tr> <td>MORTGAGE_JOIN</td> <td>DB2INST1</td> <td>MORTGAGE</td> </tr> <tr> <td>MORTGAGE_CUST...</td> <td>DB2INST1</td> <td>MORTGAGE</td> </tr> <tr> <td>MORTGAGE_DEFA...</td> <td>DB2INST1</td> <td>MORTGAGE</td> </tr> <tr> <td>MORTGAGE_PROP...</td> <td>DB2INST1</td> <td>MORTGAGE</td> </tr> </tbody> </table> Databases dropdown: IBM Db2 FA... Find tables by name... input field Automatically group tables checkbox Add to cart button 	Table	Schemas	Database	MORTGAGE_JOIN	DB2INST1	MORTGAGE	MORTGAGE_CUST...	DB2INST1	MORTGAGE	MORTGAGE_DEFA...	DB2INST1	MORTGAGE	MORTGAGE_PROP...	DB2INST1	MORTGAGE
Table	Schemas	Database														
MORTGAGE_JOIN	DB2INST1	MORTGAGE														
MORTGAGE_CUST...	DB2INST1	MORTGAGE														
MORTGAGE_DEFA...	DB2INST1	MORTGAGE														
MORTGAGE_PROP...	DB2INST1	MORTGAGE														

<ul style="list-style-type: none"> • Select Neither • Uncheck the box for Submit to catalog • Click Virtualize to complete the process 	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Table</th> <th>Schema</th> <th>Source schema</th> <th>Host/Database</th> <th>Grouped tables</th> </tr> </thead> <tbody> <tr> <td>MORTGAGE_CUSTOMER</td> <td>USER999</td> <td>X ▾</td> <td>DB2INST1</td> <td>169.46.33.180:MORTGAGE</td> </tr> <tr> <td>MORTGAGE_DEFAULT</td> <td>USER999</td> <td>X ▾</td> <td>DB2INST1</td> <td>169.46.33.180:MORTGAGE</td> </tr> <tr> <td>MORTGAGE_PROPERTY</td> <td>USER999</td> <td>X ▾</td> <td>DB2INST1</td> <td>169.46.33.180:MORTGAGE</td> </tr> </tbody> </table>	Table	Schema	Source schema	Host/Database	Grouped tables	MORTGAGE_CUSTOMER	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE	MORTGAGE_DEFAULT	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE	MORTGAGE_PROPERTY	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE
Table	Schema	Source schema	Host/Database	Grouped tables																	
MORTGAGE_CUSTOMER	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE																	
MORTGAGE_DEFAULT	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE																	
MORTGAGE_PROPERTY	USER999	X ▾	DB2INST1	169.46.33.180:MORTGAGE																	

11.4. Creating virtual table

You can create a new virtual table based on existing tables under **My data** section. You can use “drag and drop” or write your own SQL to create the view.

<ul style="list-style-type: none"> • Click Collect > Virtualized data > Menu > SQL editor to access the editor. • Copy the following SQL statement and paste it on the editor • Click on Run all 	<pre>CREATE VIEW MORTGAGE_JOIN_VIEW AS SELECT A.ID, INCOME, APPLIED_ONLINE, RESIDENCE, YRS_CURRENT_ADD, YRS_CURRENT_EMP, NO_OF_CARDS, CARD_DEBT, CURRENT_LOANS, LOAN_AMOUNT, SALE_PRICE, LOCATION, MORTGAGE_DEFAULT FROM MORTGAGE_CUSTOMER A, MORTGAGE_PROPERTY B, MORTGAGE_DEFAULT C WHERE A.ID = B.ID AND A.ID = C.ID;</pre>
<ul style="list-style-type: none"> • Click Collect > Virtualized data > Menu > My virtualized data to access the virtual table MORTGAGE_JOIN_VIEW • Check the box associated with MORTGAGE_JOIN_VIEW 	

- Click on the table actions menu 
- Select **Manage access** option
- On grant access window select All data virtualization users
- Click **Continue**

Grant access to

All data virtualization users [i](#) Specific users [i](#)

[Users](#) [Roles](#)

Search 

 Revoke [i](#)  Grant access

<input type="checkbox"/>	Name	Username	Role	User ID	Access level
					

11.5. Add virtual table to catalog

Once you create a virtual table, you can add it to the catalog, making it easily searchable.

- Click **Collect > Virtualized data > Menu > My data** to find the virtual table just created.
- Mark the checkbox associated with virtual table
- Choose **Submit to catalog** from table action
- Click on **Confirm**

Menu  | My virtualized data

Find 

Assign Join view 

Total tables: 23  Access to some tables is restricted by policies. [i](#)

 Table	Schema	Created on
<input checked="" type="checkbox"/> MORTGAGE_JOIN_VIEW	USER999	18 Oct 2019 20:17:28
<input type="checkbox"/> V2	USER999	18 Oct 2019 20:09:27
<input type="checkbox"/> V1	USER999	18 Oct 2019 20:08:40
<input type="checkbox"/> MORTGAGE_PROPERTY	USER999	18 Oct 2019 20:08:40

11.6. Publish virtualized table

A data steward needs approve the published request before the asset is added to the enterprise data catalog. You signed in as user 'admin', it should allow to publish the virtual table.

Pending Publish to Catalog Requests					
Name	Type	Project	Owner	Date Updated	Status
> USER999.MORTGAGE_JOIN_VIEW	view	-	admin	21 October 2019, 2:49PM	Pending
> USER999.Currency USER999.Country	table	-	admin	17 October 2019, 8:40AM	Pending

- Click on access the **Home** page
- Click on **Pending Publish to Catalog Requests**
- Click on icon on left for virtual table **MORTGAGE_JOIN_VIEW** that you created
- Click on **Approve**

11.7. Access information for virtual table

To access virtual table from external application, you need the JDBC connection information. Click on **Collect > Virtualized data > Menu > Add-on settings** to find out access information. You will use this information later in the building model section.

The screenshot shows the 'Add-on settings' page with the following details:

- Access information** section
- User ID**: user999
- Password**: (with **Show** link)
- JDBC connection URL**: jdbc:db2://dv-server.zen.svc.cluster.local:32051/...

11.8. Deliver Dataset

Go to the home page by clicking on  icon from left pane and check the data request tab.

Click on the data request for update that submitted by data scientist earlier.

Data requests

	Name	ID	Status	Last Updated
1	Mortgage_Data_Access	2	New	27 Mar 2019, 11:15 AM

Click on the **Source** and fill out all the necessary information. This information will be picked up by the data scientist later.

Add the **remote data** set information that you created during data transformation. In this case remote data set is MORTGAGE_JOIN_VIEW. Use the **Access information** from the **Add-on settings** information from DV.

New data request

Overview Columns Source

Source

Data source name: mortgage_join

12. Build Model

With Cloud Pak for Data, you can collaborate with other team members on analytic projects to create visualizations and machine learning models with data from your enterprise. In this step you will build a simple model to predict the possibilities of mortgage default by customer. The object of this model is to show the functionality of Cloud Pak for Data, not the prediction accuracy. One can use lot more data and build a complex algorithm to get better accuracy.

	<p>Sign in to the Cloud Pak for Data web console as user 'dst1' and password is 'dst1' that you created earlier.</p>
---	--

12.1. Navigate to analytics project

Select **Projects** option from the left pane and click on the analytics project 'mortgage_data' that you created earlier.

12.2. Create deployment space

Create a separate deployment space for your project 'mortgage_data'.

Choose : My Projects > **mortgage_data** > Settings > Associate a deployment space > New

<p>Connect to a deployment space</p> <p>New Existing</p> <p>Name MortgageDeploymentSpace</p> <p>Description (Optional) <i>Description of deployment space</i></p> <p style="text-align: right;">Cancel Associate</p>	<p>Name new deployment space as 'MortgageDeploymentSpace'</p> <p>Click on Associate</p>
--	--

12.3. Create notebook

Create a notebook from a predefined Jupyter notebook that available on Github.

<ul style="list-style-type: none"> • Go to : My Projects > mortgage_data > Add to project • Choose asset type as Notebook • The new notebook needs to create from URL • Name the notebook as MortgageNotebook • Use notebook URL as https://github.com/IBM-ICP4D/icp4d-tutorials/blob/master/assets/mortgage-002/MortgageNotebook.V25.jupyter-py36.ipynb • Click on Create Notebook 	<p>My Projects > mortgage_data > Add Notebook</p> <p>New notebook</p> <p>Blank From file From URL</p> <p>Name MortgageNotebook 24 characters remaining</p> <p>Description (optional) <i>Type your Description here</i> 500 characters remaining</p> <p>Select runtime Default Python 3.6 (1 vCPU and 2 GB RAM) ▾</p> <p>Notebook URL https://github.com/IBM-ICP4D/icp4d-tutorials/blob/master/assets/mortgage-002/MortgageNotebook.V25</p> <p style="text-align: right;">Cancel Create Notebook</p>
---	---

12.4. Review and run notebook

The majority of the code in the notebook is standard open source code that's used for various steps in the predictive analytics process.

Switch to edit mode by clicking on  icon from top of the screen

First go the **Step 2: Authenticate** section and update the **url**, **username** and **password** fields with your CPD UI console details and access credential.

My Projects > mortgage_data > MortgageNotebook

File Edit View Insert Cell Kernel Widgets Help

Format Code nbdiff

Step 2: Authenticate

```
In [140]: wml_credentials = {
    "instance_id": "openshift",
    "url" : "https://zen-cpd-zen.apps.mysluster.demo.ibmcloud.com",
    "username": "admin",
    "password": "passw0rd",
    "version": "2.5.0"
}

from watson_machine_learning_client import WatsonMachineLearningAPIClient
client = WatsonMachineLearningAPIClient(wml_credentials)
```

Next, go the Step 4: Load data section and update the **dsn_url**, **dsn_uid** and **dsn_pwd** values with the information available from **Collect > Virtualized data > Menu > Add-on settings**.

My Projects > mortgage_data > MortgageNotebook

File Edit View Insert Cell Kernel Widgets Help Trusted

Format Code nbdiff

Step 4: Load data --- Update the *dsn* values with your Data Virtualization credential

```
In [22]: #Enter the values for your database connection found under data virtualization
dsn_url = "jdbc:db2://dv-server.zen.svc.cluster.local:32051/bigsql" # e.g. "jdbc:db2://dv-server.zen.local:32051/bigsql"
dsn_uid = "user1022" # e.g. "dash104434"
dsn_pwd = "sw2#01T_674MFPT5" # e.g. "7dBZ3jWt9xN6$o0JiX!m"
```

Run through it so that you generate a model. The easiest way to do this is to open the notebook, scroll down to Step 6, click on it, then in the menu select Cell -> Run all above.

12.5. Test the model

Save the notebook and switch to the Models tab of the project (hint: right click the project name link, **mortgage_data**, at the top, and open with another tab in your browser).

If you want you can change some values in the Input section.
Then click on **Submit**.

According to input values, model will predict the possibilities of mortgage default and produce a pie chart.
